

## Straightforward, Affordable, and Customizable Genetic Testing Services

Dear Healthcare Professional,

Your patient is interested in receiving genetic testing services from Existence Genetics. Once you have access to these services, you'll be able to offer your patient valuable predictive medicine services.

Existence Genetics is a Predictive Medicine company founded by physicians. Our team has developed genetic testing panels for every medical specialty, and we deliver straightforward reports that are easy for you to understand and utilize.

With advanced DNA microarray technology, we can use a single, non-invasive saliva-based test to cost-effectively screen for more than 700 diseases and traits. And you, the physician, can easily customize the diseases and conditions to be tested for so that the panel you order is specific to your practice.

Predictive Medicine helps you integrate personalized medical services into your practice by genetically tailoring your practice to your patient's genes.

Our Genetic Reports contain unique information specifically tailored to your patient's genes:

- **Medications** – Understand what medications will be most effective and least likely to elicit an adverse reaction. The optimal starting dose of some medications can also be ascertained.
- **Screening Exams** – Identify patients who may benefit from specific or more frequent screening exams.
- **Laboratory and Radiological Exams** – Know what types of additional testing may benefit specific patients.
- **Lifestyle Modifications** – Identify lifestyle modifications that, based on your patient's genes, will be most effective in reducing risk of disease.

### The Simple 3-Step Process:

Existence Genetics helps patients and health care professionals to PREDICT, PREVENT, and PREVAIL over disease. Here are the three simple steps you and your patient will take:

#### Step 1 - PREDICT

- You perform pre-test counseling and choose the specific panel that meets your patient's needs.
- You perform a noninvasive, swab-based saliva collection and sends the sample to our CLIA-certified LabCorp laboratory for testing.

#### Step 2 - PREVENT

- You receive a personalized report that contains clinically actionable prevention information for your patient.
- You review the report and determine which preventions and treatments will be most effective.

#### Step 3 - PREVAIL

- You integrate the information from the report into your patient's long-term medical management.
- You and your patient develop personalized strategies for preventing disease before it manifests.
